

Postbaccalureate Program Sponsorship

Shape the next generation of researchers.
Co-mentor a postbac trainee.

Sponsoring a postbac trainee is an opportunity to engage top-tier talent, gain early access to cutting-edge skills and methods, and strengthen your connections to academia through the Rosetta Commons community, all while guiding the next generation of computational biology leaders.

The program provides recent college graduates with an intensive, year-long research experience in computational biology, with emphasis on protein design, structural biology, and algorithm development. Trainees complete an intensive, week-long Code School before gaining hands-on research experience, mentorship, and professional development while hosted at a Rosetta Commons laboratory.
